

Pet House

Introduction

Pet house is a software that was developed to take care of pets in many different aspects.

by using our software, the users can choose a vet or a pet sitter to take care of their needs. They can see the reviews of the care givers and their degrees and their experiences to decide whether they are a good option or not.

This application is targeted at pet owners.

Introduction

the Pet House software encompasses a range of functionalities aimed at providing comprehensive care for pets and facilitating the needs of pet owners. The software contains the following areas:

1. Pet Boarding: Enabling users to find suitable boarding facilities for their pets during vacations or periods of absence.
2. Grooming: scheduling of grooming sessions to maintain the hygiene and well-being of pets

Introduction

3. Healthcare: Facilitating vet care by booking and managing Appointment, health records, and medication schedules

4. Nutritional Guidance: Design a nutritional schedule suitable for your pet's health, designed by vets

5. Evaluation of veterinarians: View the opinions of pet breeders and their experiences with veterinarians in your

Introduction

The top corners of the slide feature decorative wavy lines in shades of brown and tan, framing the title area.

6. Community Interaction: Providing a social platform within the software where pet owners, veterinarians, and caretakers can engage with each other, share photos, experiences, tips, and opinions.

The bottom corners of the slide are decorated with stylized leaf outlines and wavy shapes in various shades of brown, tan, and beige.
