introduction

As a group we had a wonderful experience throughout this semester while making this project , we learned a lot of things related to visual design. We also had many challenges and difficulties throughout making this project, but at the end we learned and fixed our mistakes and finished the project with its best form. So today we will represent our project and the tasks we accomplished.

Task 1

- kawinly smartphone application, which is an application that shows you a variety of baked desserts and sweets and how to make them. It has two functions: the first is to provide you with alternatives for ingredients that you do not have, and the second is to ask the user about the names of the ingredients he has available and it will suggest a dish that can be prepared using those ingredients. It will be very useful when you are looking to prepare a good dish with the ingredients you have available.
- The main principles for our app consist of allowing our users to gain the full baking experience, with limited ingredients and options. The interfaces will consist of the home page, menu, search bar, and a page for chatting with the AI chef. Our AI chef is trained to understand cooking. It will give details on everything from Leto recipes to ingredient alternatives.
- **The application initial sketch :**
- **The application initial logo :**

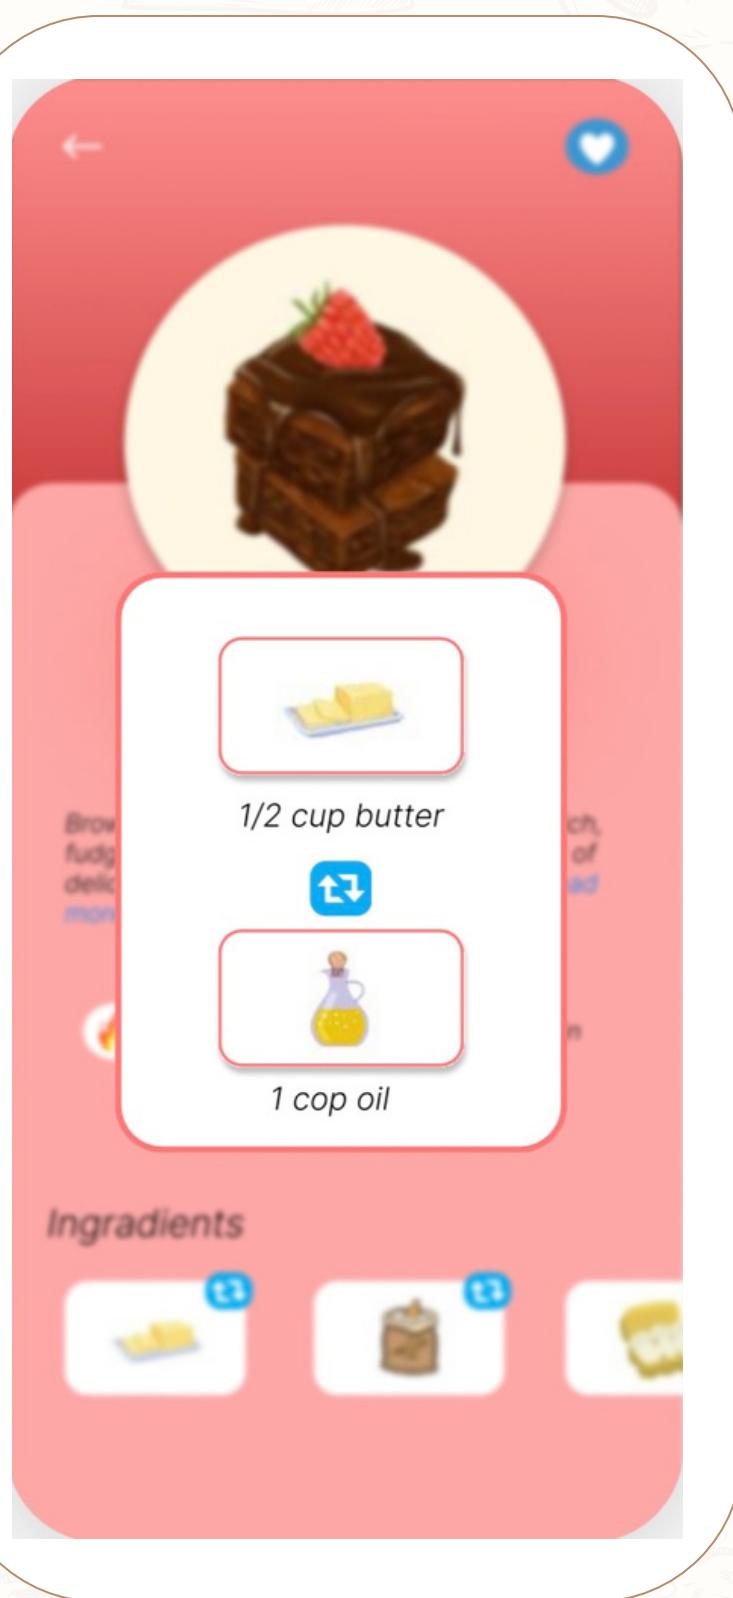

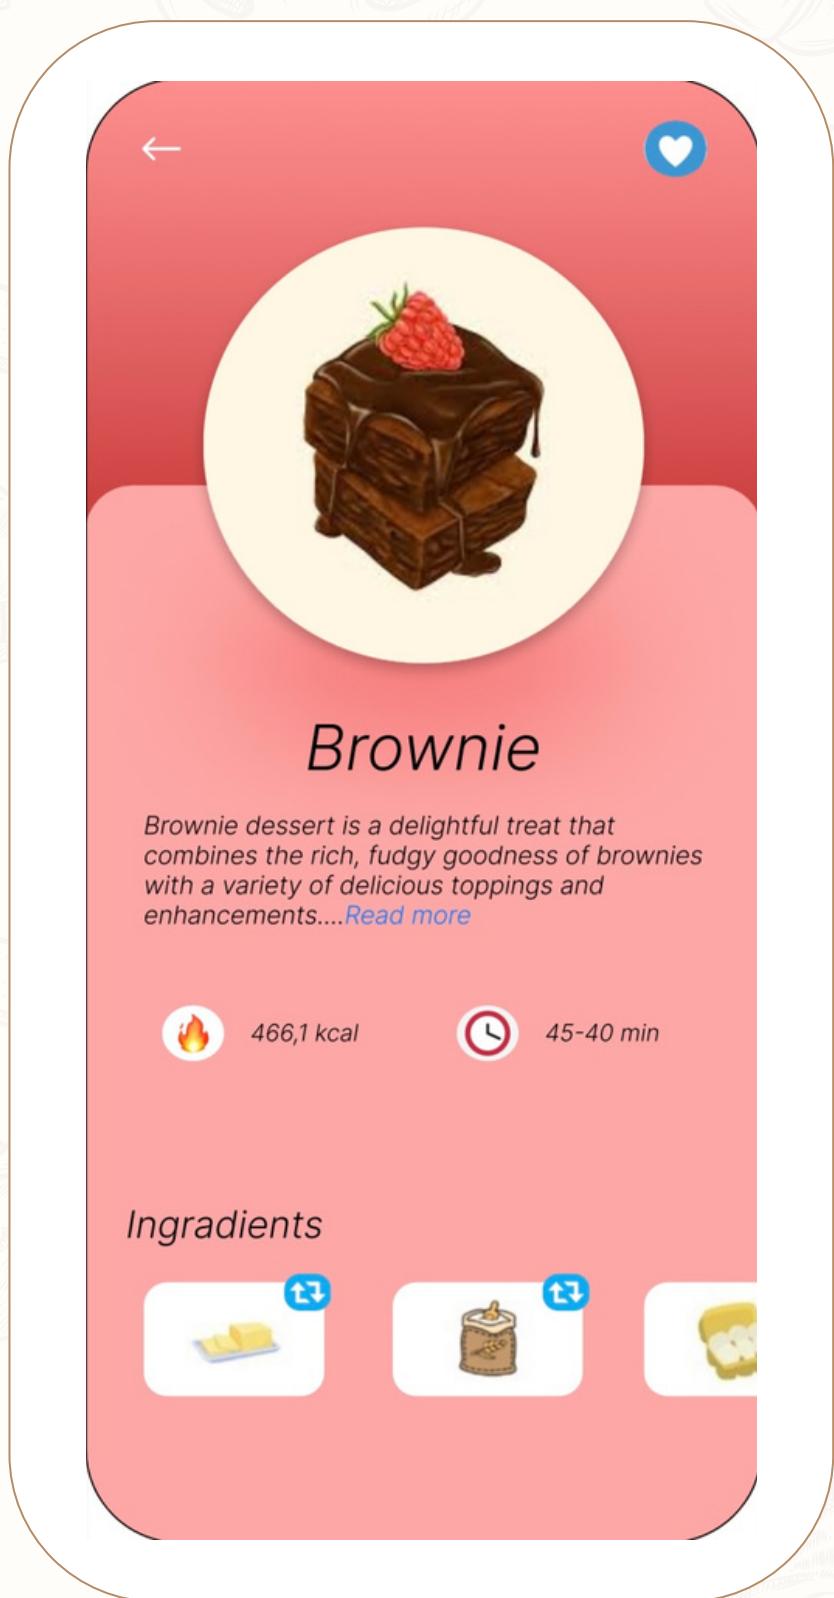

Task 2

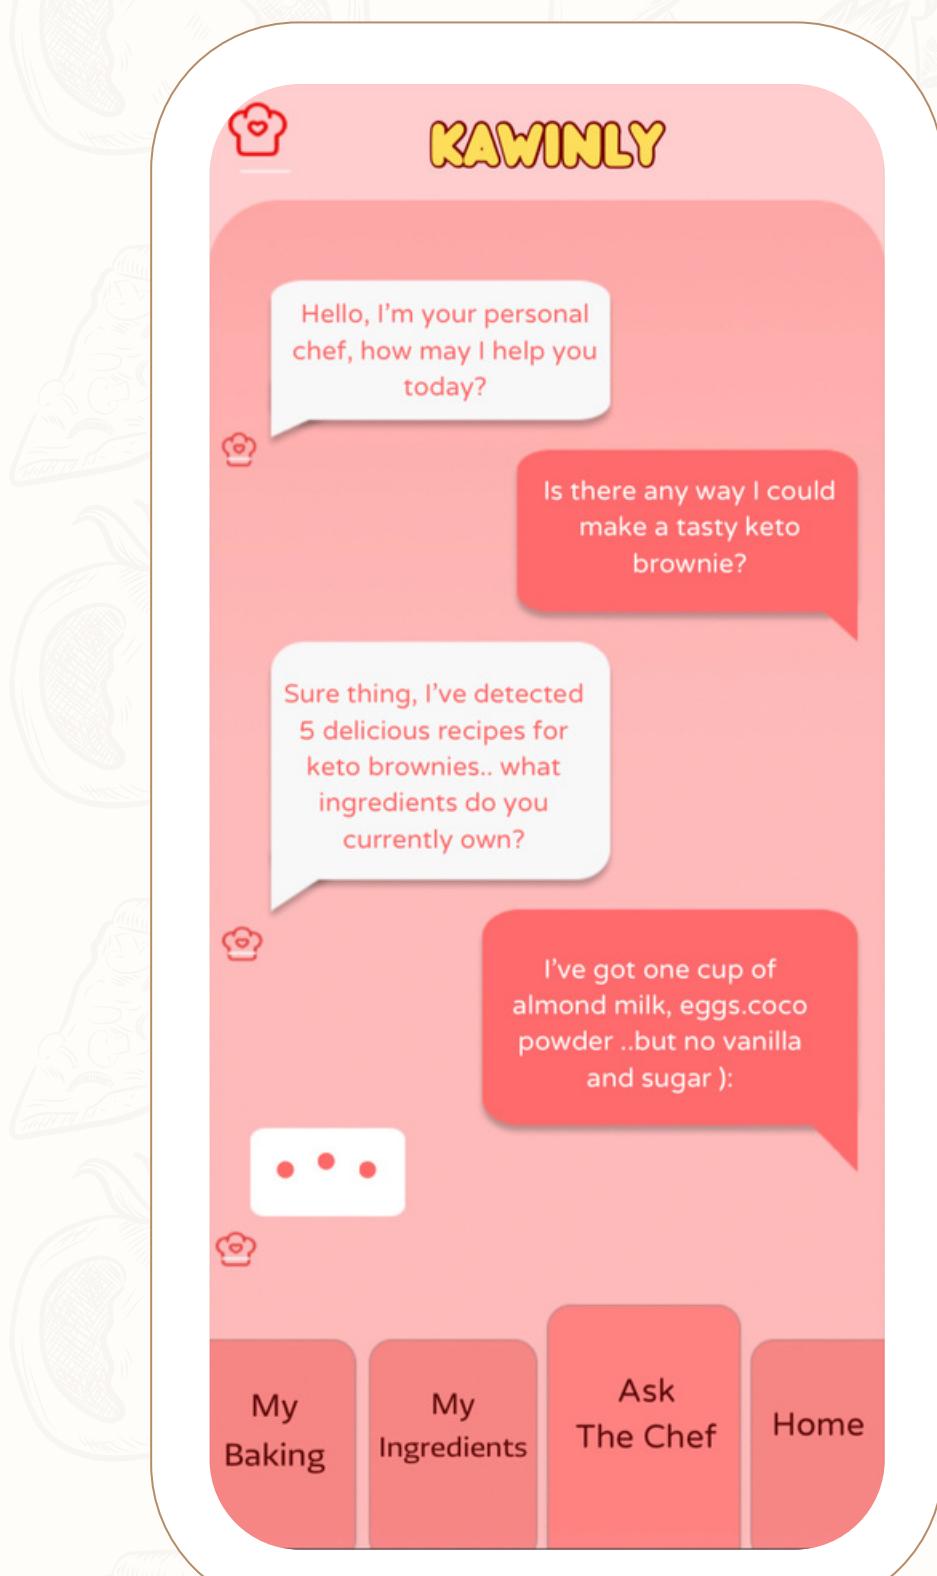

- Home page :

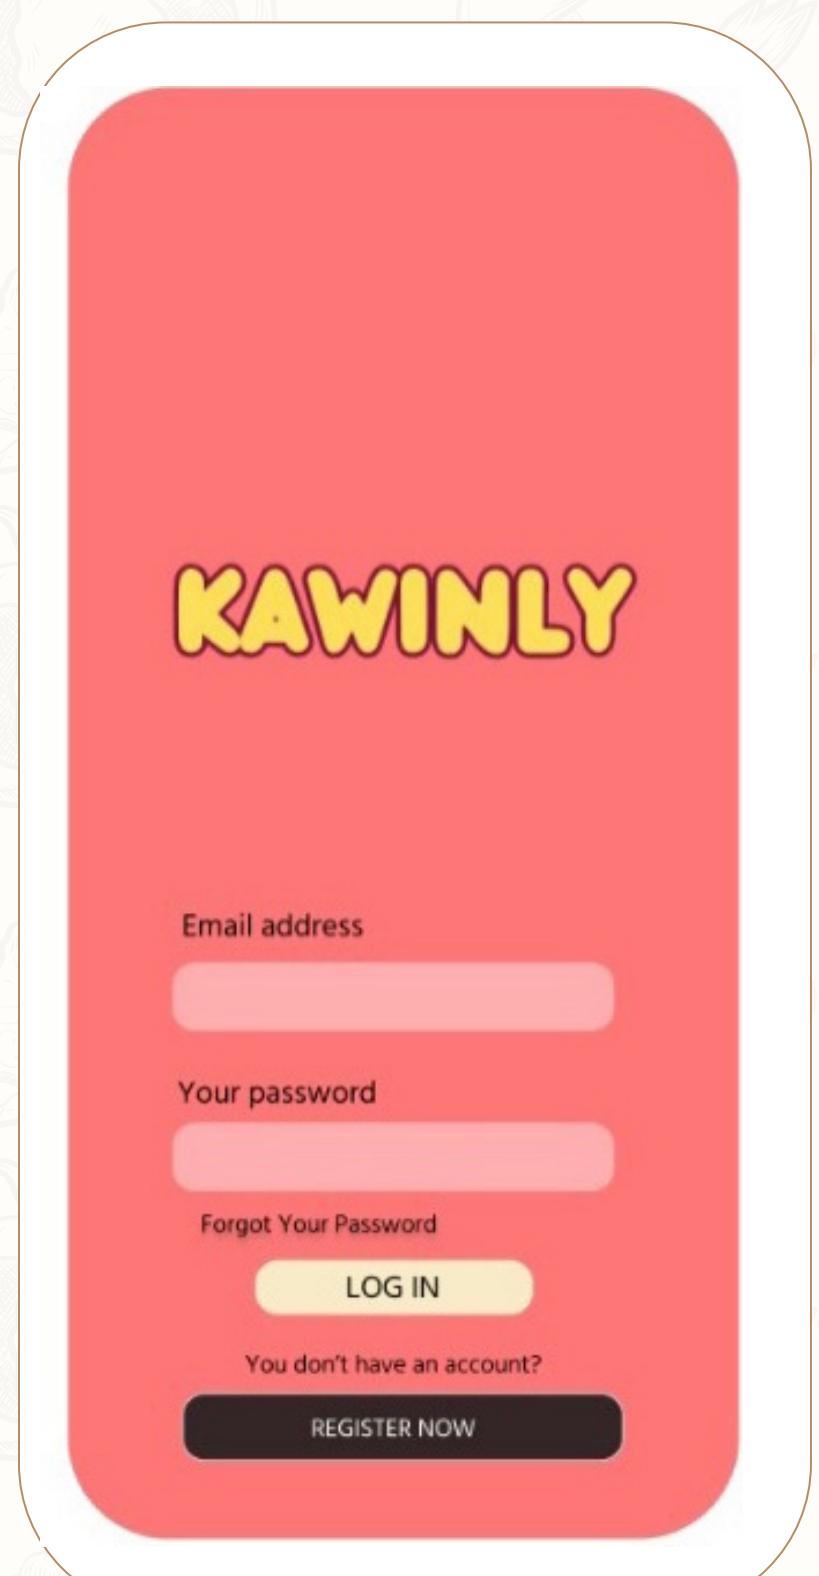

- Recipe page :

- "Ask the chef" page:

- Sign in page:

Task 3

- “not tested on animals” icon:

initial design:

Final design:

Task 4

Difficulties & Acquired skills

We had many difficulties that we faced while making our project and they were learning and creating what is needed in a short time, and choosing the most suitable color for the application interface, and choosing the ideal name for the application. We also acquired many skills as interface designers in many aspects, such as using Figma, designing the interface, and building ideas, and lastly understanding the importance of visual harmony and how to use colors and visual elements effectively.

Task 4

We always gathered and discussed each task and came up with ideas together, but when one of us comes up with an idea she is usually the one who completes it, or sometimes we split the task equally and each one choose which one to complete .

Tasks report

conclusion

At the end of our journey, where we performed many tasks and learned many skills that contribute to increasing our experience as interface designers in the field of visual design, we carried out our project to design interfaces for our special application called “kawinly” as an application that brings out the chef in you! It helps you by showing many ingredients so you can make all the dishes you want and also helps you to find alternative ingredients.

At the thank you for joining us on our journey
